

Schneider Electric Japan Holdings Ltd.

SP5000 Series

Features

SP5000 Series is the first Smart Portal product for satisfying customers' needs utilizing large volumes of data and connecting securely both upper networks (office) and lower networks (factory).

The SP5000 Series is an interface terminal that can be integrated as a display unit on an operation panel.

Equipped with 2 Ethernet ports, the SP5000 Series can easily and securely create segmented networks.

In addition, SP5000 can stably process production-related big data by combining in one unit the reliability of an HMI and the versatility of an IPC compatible with Windows applications.

SP5000 Series

Specifications

Premium Display	Screen size: 10" to 15" 16,777,216 color Rated Voltage: DC12V to DC24V
Advanced Display	Screen size: 7" to 12" 262,144 color Rated Voltage: DC12V to DC24V
× Available in 13 patterns	
Open Box	Application Memory: 64MB (CFast Card) Backup Memory: NVRAM 320KB
Power Box	Application Memory: 64MB (SD Card) Backup Memory: NVRAM 320KB
